

# Room 138

Fall 2016

September 30

## Literacy Studio

In Literacy Studio we have worked on writing reader's response letters as a way to write about our reading. We have also practiced the skill of book recommendations as another tool to write about reading. Students have also been given the task of time management now that we have started choice time during literacy!

## Math Workshop

In Math we are discussing Factors and Multiples. We have worked on determining factors, greatest common factor, multiples, and least common multiples. Students have also determined the difference between prime and composite numbers.

## Science

In science we are still learning about structures and functions of plants and animals. We took a field trip to the prairie and saw these structures and functions in action. The students are creating a Google Slideshow to present their findings.

## Team Building

In Team Building, we have completed a few more activities. We worked together as a class to lift a cup and ball over our heads using string. We also worked together in groups and as a class to put together puzzles that were broken into different pieces. The students did a great job with both activities!!

## Important Dates

October 3<sup>rd</sup> - Rosh Hashanah

No School
