

Room 138

Winter 2016

December 21

Literacy Studio

In Literacy Studio, we finished our study of short stories. Students identified the components of a short story. They listened for common themes and various writer's crafts, and wrote their own short stories. We are now starting our Determining Importance unit. Students have begun by recognizing text features and determining their importance.

Math Workshop

In math we finished our chapter on division. We finished up by finding quotients with remainders within long division problems. We are now beginning our unit on tables and line graphs. We started by creating data tables, tally charts, and bar graphs using a survey question of our choice! We will soon move to our study of line graphs.

Team Building

In Team Building, we worked together to play a fun game of charades. Students acted out various music artists, book titles, movie characters, and sports players with a partner. We also worked together as a whole class to play "jump in, jump out". Ask your children to teach you, if you get a chance!

Science/S.S.

We are a few weeks into our study of the Earth Processes. We began by learning about Pangaea and plate tectonics. We have shifted into our study of rocks and the rock cycle. We will finish up with our research projects on natural disasters.

Important Dates

December 23rd - No School (Winter Break Begins)

January 9th - School Resumes!
