

Room 138

Spring 2017

April 13

Literacy Studio

In Literacy Studio, we have been working on poetry in honor of April, which is poetry month. We are currently reading the book Crossover, which is written in free verse. We have also discussed other types of poetry and we are starting to write our own poems this week, beginning with haikus! We will use inferring skills to identify the theme and make meaning of various poems.

Math Workshop

In math we are continuing to work on angles. The students have learned how to identify angles as acute, obtuse, right, or straight. They have also begun to master the skill of using a protractor to measure and draw angles. Next week, we will move on to drawing different shapes based on their angle measurements.

Team Building

This month we have worked on a few fun team building activities! One of the activities encouraged the students to work together by walking around the room while keeping a balloon in between their stomachs and the person in front of them. We also did an activity involving carrying noodles in between plates!

Science/S.S.

In science we have continued to discuss energy transfer. After identifying different types of energy, the students have started to investigate the different ways to transfer energy from one type to another.

Important Dates

April 14th– Good Friday No School

April 21st– Half Day Institute Day
(Dismissal at Noon)

May 6th– HOH 5k Run
